Motivated software engineering graduate with master degree in Computer Science from CSU East Bay. Proficient in Python and passionate about cloud development(AWS). Strong desire to learn and contribute. Looking for a full-time entry level position as a backend engineer.

SKILL

PROFICIENT: **Python, MySQL, Git, Docker** | FAMILIAR: NoSQL(DynamoDB), Django, Java, Spring, C#, .NET, JavaScript, Node.js, React, HTML5, VMware | CERTIFICATE: [AWS Certified Cloud Practitioner](#) | AWS: ECR, ECS, Elastic Beanstalk, Lambda, Cloudwatch, S3, RDS(postgre), dynamoDB

RELEVANT PROJECT

Polls web app

06/2021 - 06/2021

- Implement a public website that shows polls and allows users to vote, an admin website that provides the editing functions for the polls constructed with Django Framework and SQLite
- Create the automated testing separating TestClass for each model or view and test method for specific conditions
- Package the polls app with PyPI and setuptools that allows the app to be installable for the reusability
- Dockerize/publish image to AWS Elastic Container Registry, deploy to AWS Elastic Beanstalk

Covid Case Tracker

05/2021 - 05/2021

- Implemented a covid case tracker that pulls the number of new cases all over the world every day from CDC website
- Used AWS Lambda to run .py code which draws the plotted trend graph and stored image file and data in AWS S3
- Implemented AWS Cloudwatch once the numbers increase significantly for a certain country

Blog website

01/2020 - 05/2020

- Build views and an edit function with React.js and role-based authorization using session cookies
- Coordinate with team members to complete the project in time and utilize Express of node.js

Microservices With Spring Cloud Netflix

03/2021 - 05/2021

- Create Spring Boot applications for a service registry called Eureka server and two web services
- Program JPA based repositories, web controller, and RestTemplate that allows each service to communicate with their hostname and enables load-balancing using Ribbon

CUDA programming with shared memory

10/2020 - 12/2020

- Optimize the use of memory between threads on parallel computing to maximize the bandwidth. It avoids redundant transfers by loading and storing data in a coalesced pattern to shared memory from global memory.

EXPERIENCE

GSCMS Inc, Seoul, South Korea

Software Engineer

Feb 2017 - Dec 2018

- Launch **task automation(C#, .NET)** with team members on Windows server. The service reduced the time for the laborious task in the accounting department, which manually fetched bank statements of various online banking services, **from a few hours to a second, and released it to production**
- Engineer the **test automation environment** in various Operating Systems (OS) on **VMware** for operational acceptance and regression testing in an exploratory approach. The corner, critical, and custom cases by analyzing error logs and defects from the beta users are considered. **It cut off the beta version error rate by 99%**
- Write/review/debug new UIs, modify legacy functions and query statements for Oracle SQL, and collaborate with partner teams for the integration. Documented the creation and modification of development and maintenance
- Work in an Agile environment for software development, experience in planning and working in sprints

EDUCATION

Cal State University East-bay, Hayward, CA

M.S. in Computer Science

Jan 2019 - May 2021

Samsung Multicampus, Seoul, South Korea

[NCS] Android Developer Course

May 2016 - Nov 2016

Sejong University, Seoul, South Korea

B.S in Electronic Engineering

Mar 2009 - Aug 2015
